Question 1

100 Points

Use the data in the folder 20260921_19_16_09.

1- Do FFT on the signal for all three directions of the three accelerometer. use hanning window

IIS2DH_ACC
iis3dwb_acc
ism330dhcx_acc

2- from DeviceConfig.json, find the dynamic range of each accelerometer in g and the sampling rate of each accelerometer (in the same folder). mark the line shows the required info and add it to your report.

3- Do not select any frequency range for FFT, what is the maximum frequency you see on the FFT representation of each sensor?

remember this is for the case where you increase the rpm from zero to max rpm.

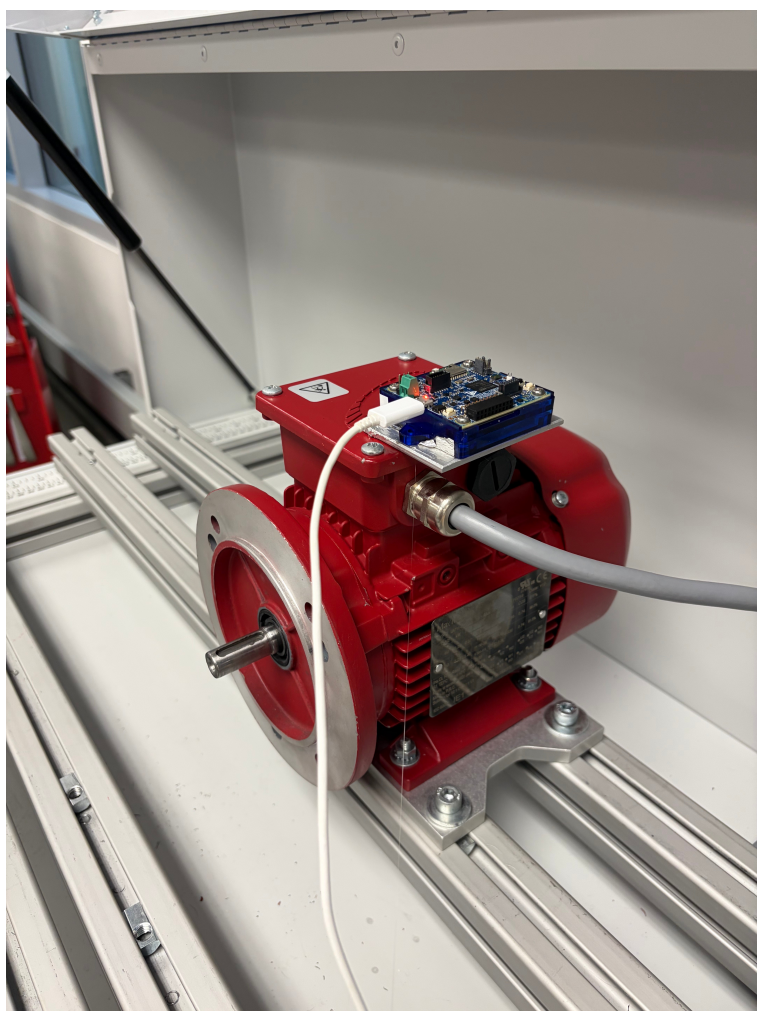

4-plot FFT of the signal for each accls and only z-direction
5-plot waterfall of each signal for each accl and only z-direction

please submit your work as a PDF
